CANADER

Repair Material of Choice

CANADER Cold Mix is a mixture of top quality treated aggregate with a specified particle size from 0 – 8 mm mixed with a unique bitumen blend of wetting agents, binding compounds and special additives. The unique composition of CANADER brings high advantages like **easy workability** in all weather conditions even with water in the potholes creating a **watertight bond between** the pavement **and** the **repair material**. CANADER offers **long-term storability**.

We never have or ever will compromise our high standard quality control procedures at our various production facilities.

CANADER Cold Mix is a unique repair material for potholes, utility installations and pavement overlays engineered to **SAVE MONEY**. **Even the wettest, coldest weather conditions up to - 10 °C will not impair CANADER's performance.** CANADER remains flexible and workable. We recommend the use of special grade **CANADER Cold Mix L** for **summer applications** with the set up time of the product being much faster. CANADER Cold Mix is a perfect long term repair, cost effective and an easy-to-use product.
